JUNE ELIZABETH KOEHLER JENNINGS died peacefully at home on Tuesday, May 6, 2025. She was born on June 13, 1941 to Herman and Marie Mills Koehler. She was the first of four children. While young, her family moved to Steuben County, NY when her parents purchased a dairy farm. She grew up there, as a "farm girl".

June attended Arnot Ogden School of Nursing and worked as a Registered Nurse at the Arnot until her retirement. During her training, she met James Jennings. They were married in September of 1962 and enjoyed 56 years of marriage. June and Jim had two daughters, Sara Baumgartner (Russell) and Laura Bingell (Leif).

June was predeceased by her husband, parents and two sisters, Elsie Swartz and Kathy Walker. She is survived by her two daughters, her brother Ken Koehler (Karen), close cousins and many nieces and nephews.

June's life was full. She had many interests including her pets, crafts, puzzles and reading. She was an avid student of the Bible and was eager to share her Bible-based hope with others. She was baptized as one of Jehovah's Witnesses in 1993 and was an active member of the Watkins Glen Congregation, where she was beloved, for over 25 years.

June was firm in her belief of Jesus' promise that there would be a resurrection on the "last day". (John 11:24) She spoke often of this hope of living - healthy and vibrant - in a peaceful earthly paradise forever.

"The righteous will possess the Earth and they will live forever on it." -Psalm 37:29

Avoid the pain of a stress fracture by easing back into spring activities

Stress fractures are common injuries that begin with repetitive and excessive stress on a bone, usually involving the leg or foot. Unlike a traumatic bone fracture, many patients overlook the early stages of stress fractures until the injury worsens, causing significant pain and swelling. Ignoring the pain can lead to worsening of the fracture and occasionally even necessitate surgery.

Typically, stress fractures occur when physical activity or exercise strains a patient's leg or foot bones beyond their strength. Even moderate activity can cause a stress fracture when patients have not gradually conditioned their bodies and are vitamin D deficient, which affect bone strength.

What are the symptoms of a stress fracture?

Pain and swelling at the fracture site that worsens with physical activity are common symptoms. Stress fractures most commonly affect the leg — often the tibia, or shinbone, or the foot — frequently the navicular bone located between the ankle and the midfoot, and the metatarsals behind the toes. The fifth metatarsal on the outside of the foot is a common location for a stress fracture.

Who is at risk for a stress fracture?

Women have a slightly higher risk than men. Athletes, military recruits, and those participating in high-impact activities such as gymnastics, basketball, volleyball, soccer, or who run over 25 miles per week are more likely to get stress fractures. Smoking, having over 10 alcoholic drinks per week, and lack of exercise are also risk factors. Rapidly increasing physical activity or an exercise program can also cause stress fractures.

Alec Macaulay, MD

After a winter of inactivity, many Finger Lakes residents are at risk for stress fractures when they begin a warm-weather exercise regimen. That risk can be reduced by easing back into physical activity, cross-training, and non-impact exercises.

How is it diagnosed?

Sometimes a diagnosis is made from a medical history and physical exam, but imaging tests such as X-rays, bone scans and magnetic resonance imaging are often needed.

How is a stress fracture treated?

Eliminating the activities that caused the injury and prevent it from healing is essential. Patients may need crutches, casts, walking boots or similar aids for several weeks to rest the bone and let it start to heal. Addressing vitamin D deficiency is also important.

The earlier you visit your doctor about a stress fracture, the sooner you will return to your activities. Most stress fractures heal without problems, but some fractures, such as those in the tibia, may require surgery to heal properly.

Dr. Alec Macaulay is an Orthopedic Surgeon with Cayuga Orthopedics and serves on the medical staff of Cayuga Medical Center. His clinical interests include both the surgical and non-surgical treatment of athletic injuries, arthritic conditions, and musculoskeletal trauma. He specializes in surgery of the knee, ankle and foot and can be reached at (607) 272-7000.

GET THE FACTS ABOUT MEASLES. With the increase in measles cases across the country, Schuyler County Public Health is reminding community members about the signs and symptoms of measles, steps to take if you experience these symptoms, and how to prevent measles infection. “Measles is a very contagious virus that can spread easily among people who aren’t protected by vaccination or prior infection,” shared Schuyler County Public Health Director Jill Kasprzyk. “If someone with measles is in a room, 9 out of 10 people who aren’t protected will get measles.” Schuyler County Public Health shared the following information:

- Measles spreads in the air when an infected person coughs or sneezes. Measles remains in a room where a contagious person has been for up to 2 hours after the person has left the room.
- Common signs and symptoms of measles are rash, high fever, cough, runny nose, and red, watery eyes (conjunctivitis). Talk to your doctor or your child’s doctor if you or your child have these symptoms.
- Measles can lead to serious health complications. About 1 in 5 unvaccinated people in the U.S. who get measles is hospitalized and as many as 1 out of every 20 children with measles gets pneumonia, the most common cause of death from measles in young children. Measles can also lead to encephalitis (swelling of the brain) and subacute sclerosing panencephalitis (SSPE). “The best way to prevent measles infection is by getting the MMR vaccine,” shared Kasprzyk. “The MMR vaccine helps your natural immune system develop antibodies to fight against measles, mumps, and rubella. The two-dose MMR vaccine series is 97% effective at preventing measles. Talk to your doctor or your child’s doctor to check if the vaccine is needed or if you are already protected from measles infection.”

MEET BEEMER

Age: 4 Years
Sex: Neutered Male
Breed: Pit Bull Mix
Size: Medium/Large

If you love 'em big and beefy, Beemer is your guy!!! Maybe not all that big really weighing in at 60 pounds but the size of that head can be a bit deceiving. And, this guy is all muscle and love! If you're looking for someone to brighten your day Beemer is just a sweetheart! He loves to cuddle...loves to play and loves to entertain you. Despite his rather short, stocky stature he is a joy to walk and is ready to go the distance. He's really sort of a gentle giant. And, who wouldn't have a great day when you see that smile? He'll always be by your side Beemer is an absolute gentleman on a leash! So, very dignified! He is a joy to walk. Beemer would enjoy an adult home or a home with older kids, but please no other dogs or cats. While he seems to get along fairly well with the ladies, it would be best if he's an only canine. Beemer is thought to be about four years old.

The adoption fee for adult dogs is \$225. All have been spayed or neutered, vaccinated for rabies, kennel cough, DH(L)PP, have had a complete fecal analysis, treated for internal and external parasites, are heartworm tested and on heartworm preventative and flea and tick preventative and are microchipped. Stop in on Monday, Thursday and Friday from 10- 1, Saturdays from 10 - 4, Sundays from 2-5 without an appointment or call us at 607-594-2255 to schedule an appointment. Or, visit our website www.schuylerhumane.org to fill out an adoption application to get the process started.
